

Interdisciplinary Graduate Certificate in Sustainability Elective Proposal

Deadlines: September 15 and March 15

Contact person: _____ Date: _____

Department: _____ Course # _____

Course title: _____

Course description:

Student learning outcomes:

Course format, semester, and frequency:

How do your learning outcomes serve the learning outcomes of the graduate sustainability certificate?

Please indicate in which elective area(s) (ecology, economic/policy, social justice) your course would best fit and describe your rationale.

- The **ecology** area is designed to give students basic ecological science literacy. Courses addressing and/or applying basic ecological principles such as ecological limits, systems, interdependence, and ecological change are a fit for this category.
- The **social justice** area is designed to highlight the ways that people are impacted by socio-environmental factors. These courses likely interrogate issues of diversity, privilege and equity in a systems context.
- The **economic/policy** area is designed to provide students with foundational economic and policy principles including topics such as global distribution of resources, natural and man-made capital, and how political and economic systems impact and are impacted by ecological degradation.
